

The title

and a possibly very long subtitle

the author

The first section

The first slide

With just some **text** in *various* styles in it.

The second slide

A first, multiline paragraph with some random words and even a correctly placed footnote¹. Can you believe that? Because honestly I thought automatically placing footnotes was very hard.

And a second paragraph here.

¹ ... And this is the footnote.

Some bullet points

- ❖ one
- ❖ two
 - ❖ one
 - one
 - two
 - ❖ two
 - ❖ three
- ❖ three

And a nested numbered list

1. one
2. two
 - 2.1 one
 - 2.1.1 one
 - 2.1.2 two
 - 2.2 two
 - 2.3 three
3. three

Another text slide

Where the text

Is followed by a subheading

And some more text

A quote

Introduced by some text, here are
Some words of wisdom

And a comment

The fancy section

SPRÅKBANKENTEXT

FigureWith a caption

A syntax-highlighted code example:

```
haskellExample :: From -> To  
haskellExample from = to
```

Plus some inline monospaced text!

A little bit of math mode

Here is a pretty senseless formula:

$$\sum \pi r^3$$

With equal spacing above and below, *obviously*.

The same applies to quotes

This text is before the quote
This is the actual quote

this is the text that follows the quote.

And finally a table

A very realistic example, of course:

col a	col b	col c
a1	b1	c1
a2	b2	c2
