

# The title

and a possibly very long subtitle

the author

# The first section

# The first slide

With just some **text** in *various* styles in it.

# The second slide

A first, multiline paragraph with some random words and even a correctly placed footnote<sup>1</sup>. Can you believe that? Because honestly I thought automatically placing footnotes was very hard.

And a second paragraph here.

---

<sup>1</sup> ... And this is the footnote.

# Some bullet points

- ❖ one
- ❖ two
  - ❖ one
    - one
    - two
  - ❖ two
  - ❖ three
- ❖ three

# And a nested numbered list

1. one
2. two
  - 2.1 one
    - 2.1.1 one
    - 2.1.2 two
  - 2.2 two
  - 2.3 three
3. three

# Another text slide

Where the text

Is followed by a subheading

And some more text

Introduced by some text, here are

*Some words of wisdom*

And a comment

# The fancy section

SPRÅKBANKENTTEXT

FigureWith a caption

A syntax-highlighted code example:

```
haskellExample :: From -> To  
haskellExample from = to
```

Plus some inline monospaced text!

# A little bit of math mode

Here is a pretty senseless formula:

$$\sum \pi r^3$$

With equal spacing above and below, *obviously*.

# And finally a table

A very realistic example, of course:

col a	col b	col c
a1	b1	c1
a2	b2	c2
